

Letting the outside in

A sliding door opens up a multitude of possibilities. Open this door just a few centimetres for a little fresh air, a little wider to slip out into the garden or open it all the way to really let the outside in. This versatile door creates an extra feeling of space and generates more natural light within the home.

CP 155 Slide and CP 155 Lift & Slide

All types of CP 155 sliding door use durable, stainless steel wheels and rails for ease of operation. In the case of the lift and slide system, the sliding door is lifted slightly before opening or closing. This reduces the friction and makes the operation smooth and effortless. In the closed position, the lift and slide door is lowered onto the track, providing additional weather resistance.

Monorail, duo rail or 3-rail

A **monorail system** combines a moving part with a fixed glazed element that is anchored directly into the outer frame profile for a minimalistic look. The fixed pane is normally set to the inside of the track and is internally beaded. If the Minergie specification product is required, the fixed pane will be set to the outside of the track and will be externally beaded.

	X	X	X

A **duo rail system** integrates two glazed opening vents with an identical appearance, giving an aesthetically pleasing and versatile sliding door. Both vents can be made as sliding elements, giving total flexibility.

A **3-rail system** makes it possible for a third opening vent to be installed. This solution allows the user to slide door leaves one and two behind leaf three, opening up two-thirds of the width to the garden.

Performances

Energy		Uf-value up to 1.07 W/m ² (*), depending on the frame/vent combination									
	Thermal insulation ⁽¹⁾ EN ISO 10077-2										
Comfort		Rw (C; Ctr) = 35 (-2;-5) dB / 42 (-1;-3) dB, depending on glazing type									
	Acoustic performance ⁽²⁾ EN ISO 140-3; EN ISO 717-1										
	Air-tightness, max. test pressure ⁽³⁾ EN 12207	1 (150 Pa)	2 (300 Pa)	3 (600 Pa)	4 (600 Pa)						
	Water-tightness ⁽⁴⁾ EN 12208	1A	2A	3A	4A	5A	6A	7A	8A (450 Pa)	9A (600 Pa)	E900 (950 Pa)
	Wind load resistance, max. test pressure ⁽⁵⁾ EN 12211; EN 12210	1 (400 Pa)	2 (800 Pa)	3 (1200 Pa)	4 (1600 Pa)	5 (2000 Pa)	Exxx (>2000 Pa)				
	Wind load resistance to frontal deflection EN 12211; EN 12210	A (1/750)			B (1/200)			C (1/300)			
Safety											
	Burglar resistance ⁽⁶⁾ ENV 1627 - ENV 1630	RC 1			RC 2			RC 3			

This table shows classes and values of performances which can be achieved for specific configurations and opening types.

⁽¹⁾ The Uf-value measures the heat flow. The lower the Uf-value, the better the thermal insulation of the frame.

⁽²⁾ The sound reduction index (Rw) measures the capacity of the sound reduction performance of the frame and glass.

⁽³⁾ The air tightness test measures the volume of air that would pass through a closed window at a certain air pressure.

⁽⁴⁾ The water tightness testing involves applying a uniform water spray at increasing air pressure until water penetrates the window.

⁽⁵⁾ The wind load resistance is a measure of the profile's structural strength and is tested by applying increasing levels of air pressure to simulate the wind force.

⁽⁶⁾ The burglar resistance is tested by static and dynamic loads, as well as by simulated attempts to break in using specified tools. This variant requires specific burglar resistance accessories.
